

ARE YOU MONITORING YOUR FASTEST GROWING THREAT?

USER-BASED THREATS: IDENTIFYING SUSPICIOUS ACTIVITIES AND UNDERSTANDING INTENT

The risk of user-based threats has never been higher. Identifying who or what is driving a data breach is crucial for successful remediation and recovery at multiple levels. Unfortunately, 76 percent of all breaches stem from user-based threats that involve validated account information that has either been stolen or misused. Because most companies have little visibility into what users are actually doing once logged in, this type of security breach often goes undetected for months.

ObserveIT is a pioneer in user activity monitoring, and the only company that provides tailored analytics, alerting and bullet-proof forensics to effectively address the growing risk of user-based threats. With a completely software-based solution, ObserveIT provides instant value by allowing companies to quickly follow users across any system and records every action, keystroke and file they access. By alerting companies to suspicious behavior in real-time – and providing forensic evidence on exactly what happened – ObserveIT is uniquely able to help companies prevent the loss of sensitive corporate and customer information, and also satisfy PCI, HIPAA, SOX, and ISO compliance regulations in minutes.

HOW IT WORKS

ObserveIT provides screen-recording technology to capture all user behavior, regardless of the environment. Beyond providing video playback of all user activity, ObserveIT turns these video recordings into User Activity Logs that can be easily searched, analyzed, audited and acted upon. Real-time alerts based on user actions inform administrators about suspicious and unusual activity, to operationalize forensic analysis and enable early detection and mitigation.

GAINING VISIBILITY IN YOUR ENVIRONMENT BY SHIFTING FROM INFRASTRUCTURE TO USER ACTIVITY MONITORING

RECORD ALL ACTIVITY

With ObserveIT, you will always know exactly who did what on company servers and desktops. ObserveIT records user activity in every application, Web page and system area, regardless of how users gain access (RDP, SSH, Telnet, ICA, direct console login, etc.). ObserveIT records sessions in Citrix published applications, Citrix virtual desktops and VMware environments, as well as stand-alone Windows and Unix/Linux desktops and servers.

ANALYZE USER BEHAVIOR

ObserveIT dramatically shrinks the time to discover the “who, what, where, when” of security incidents and breaches from weeks or months to just minutes. ObserveIT continually analyzes user behavior to detect any activities that are out of role, suspicious or in violation of security policies. Security teams can easily tailor alerts to their specific needs, using an intuitive and powerful analytic engine.

INVESTIGATE SUSPICIOUS ACTIVITY

ObserveIT makes it easy to investigate unusual or suspicious user behavior with searchable user activity logs and video playback of all sessions. Going far beyond simply recording the on-screen activity to video, the software transcribes every session into an easy-to-read summary so that watching the video isn't necessary to know what the user did. Clicking on any particular event in the summary launches the video playback from that exact moment.

ADD USER CONTEXT TO YOUR SECURITY ECOSYSTEM

By integrating user context into existing architectures—SIEM, ITSM, identity & access solutions and others—companies can significantly enhance their levels of security and visibility. ObserveIT has developed a number of bi-directional integrations designed to simplify the process,

A SELECTION OF OBSERVEIT CUSTOMERS

We have earned the trust of 1,200+ customers, including these fine companies:

				
				
				
				

observe **it**

Capture exactly who did what on critical servers and endpoints

Detect out-of-policy user behaviors with real-time analytics and alerts

Rapidly respond with user activity logs and video-like playback for all sessions
