AWARDS

America's Most Promising Company

Product of the Year

Security Innovation of the Year

Malwarebytes Endpoint Security is an endpoint protection platform that uses multiple technologies to proactively protect your computers against unknown and known threats. Delivering multi-stage attack protection provides companies of all sizes, across all industries, around the globe the ability to stop cybercriminals at every step of the attack chain.

Key benefits

Stops advanced malware and ransomware attacks

Reduces the chances of data exfiltration and saves on IT resources by protecting against malware that traditional security can miss.

Protects against exploits and ransomware

Protects unsupported programs by armoring vulnerabilities against exploits. Signature-less behavioral monitoring technology automatically detects and blocks unknown (zero-hour) ransomware.

Increases productivity

Maintains end-user productivity by preserving system performance and keeping staff on revenue-positive projects.

Easy management

Simplifies endpoint security management and identifies vulnerable endpoints. Streamlines endpoint security deployment and maximizes IT management resources.

Scalable threat prevention

Deploys protection for every endpoint and scales as your company grows.

Detects unprotected systems

Discovers all endpoints and installed software on your network. Systems without Malwarebytes that are vulnerable to cyberattacks can be easily secured.

Remediates Mac endpoints

Rapidly detects and removes malware from OS X endpoints, including adware.*

*The included Mac remediation client is not managed by the management console and does not offer real-time protection.

Anti-malware

Features

- Proactive anti-malware/anti-spyware scanning
- Three system scan modes (Quick, Flash, Full)
- Malicious website blocking
- File execution blocking

Anti-exploit

Features

- Protection against operating system security bypasses
- Memory caller protection
- Application behavior protection
- Application hardening

Anti-ransomware

Features

- Dedicated real-time detection and blocking engine
- Proprietary ransomware behavioral technology
- Signature-less identification of unknown (zero-hour) ransomware
- Small system footprint
- Compatible with third-party security solutions

Management Console

Features

- Scalable endpoint management with push install functionality
- Flexible scan scheduling
- Threat view with central reporting
- Virtual deployment simulator
- Active Directory integration
